Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 2-3, 9-10, 14 and 18, drawn to the silicon nitride film satisfying the particular formula at a wavelength of 555 nm, classified in class 349, subclass 43.
 - II. Claims 4-5, drawn to the silicon nitride film having a particular thickness' range, classified in class 349, subclass 138.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as it can be used in other display devices such as EL, OLED, plasma display devices. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

2. If Group I is elected above, a further election of one of the following patentably distinct species of the claimed invention is required:

(Ia) the specifics of the device being comprised of $d-10 \leq 555 \times m / (2 \times n) \leq d+10$ (claim 2);

Art Unit: 2871

(Ib) the specifics of the device being comprised of $0.9d \leq 555 \times m / (2 \times n) \leq 1.1d$ (claims 3, 9-10, 14 and 18).

3. If Group species (Ib) is elected above, a further election of one of the following patentably distinct species of the claimed invention is required

(Ib1) the specifics of the device being comprised of $0.9d \leq 555 \times m / (2 \times 1.5) \leq 1.1d$ (claim 9);

(Ib2) the specifics of the device being comprised of $0.9d \leq 555 \times m / (2 \times 2) \leq 1.1d$ (claim 10);

(Ib3) the specifics of the device being comprised of $0.9d \leq 555 \times m / (2 \times 1.6) \leq 1.1d$ (claims 14 and 18).

4. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6-8, 11-13, 15-17 and 19 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 2871

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
